Top Skills

Java Development
Java Frameworks
Spring Boot

Certifications

Core Java
Oracle Database 12c: SQL
Fundamentals
Cisco Certified Network Associate
Security (CCNA)
Full Stack Product Engineer

Vinayak Chaurasia

Software Engineer | Java Backend | Spring Boot | Microservices |
Kafka | Redis | AWS | Docker | Kubernetes | Distributed Systems |
System Design | AI/GenAI | OpenAI | RAG
Deoria, Uttar Pradesh, India

Summary

Software Engineer with 5.7+ years of experience designing and building scalable, cloud-native applications using Java, Spring Boot, Microservices, Kafka, Redis, AWS, Docker, and Kubernetes. I specialize in developing distributed systems, event-driven architectures, and high-performance backend services that power real-time analytics and business-critical applications. My experience includes designing and building REST and gRPC APIs, developing Kafka-based streaming solutions, implementing reactive systems using Project Reactor, and optimizing application performance, scalability, and reliability. I have experience integrating AI capabilities into enterprise applications, including building OpenAI-powered call summarization solutions that improved agent productivity and reduced call wrap-up time. Additionally, I have driven observability initiatives using Datadog, Grafana, and Prometheus, enabling proactive monitoring, faster incident resolution, and improved system reliability.

Core Expertise # Cloud-Native Architecture # Java & Spring Boot # Microservices & Distributed Systems # Event-Driven Architecture (Kafka) # REST APIs, gRPC & Reactive Programming # Kubernetes & Docker # AWS Cloud Services # OpenAI & AI-Powered Applications # CI/CD Automation # Performance Optimization # Observability (Datadog, Grafana, Prometheus) # System Design & Technical Architecture

Prior to working on cloud-native platforms, I gained experience in the Capital Markets domain, building solutions for securities trading and portfolio management systems. I enjoy solving complex engineering challenges, driving architectural improvements, mentoring engineers, and leveraging modern technologies to build scalable, resilient, and impactful products.

Experience

Verint

Research And Development Engineer

May 2024 - Present (2 years 4 months)

Bengaluru

Software Engineer | Cloud-Native Microservices | AI Solutions | Distributed Systems

- Architected and developed cloud-native microservices using Java, Spring Boot, gRPC, Reactor, Docker, and Kubernetes, supporting real-time interaction analytics for 100+ customer service agents.
- Built and deployed AI-powered call summarization using OpenAI APIs, reducing agent wrap-up time by 15% and improving operational efficiency.
- Designed and implemented Kafka-based event-driven architectures, processing 10,000+ messages per second with high availability and fault tolerance.
- Developed scalable RESTful APIs and gRPC services to enhance inter-service communication, reliability, and performance.
- Led performance optimization initiatives that improved application latency, throughput, and system scalability.
- Implemented comprehensive observability and monitoring using Datadog, Grafana, and Prometheus, reducing incident recovery time by 20%.
- Automated CI/CD pipelines using Harness, Docker, and Kubernetes across 10+ microservices, reducing release cycles by 50%.
- Created robust testing frameworks with JUnit and Mockito, achieving 95% test coverage and improving software quality.
- Implemented Kubernetes autoscaling strategies and contributed to AWS migration efforts, improving infrastructure utilization by 30%.
- Participated in architecture reviews and technical design discussions, driving scalable and resilient software solutions.

VERINT SYSTEMS

Software Engineer

May 2024 - Present (2 years 4 months)

Architected and developed cloud-native microservices using Java, Spring Boot, gRPC, and Reactor for real-time interaction analytics supporting 100+ customer service agents. Built AI-powered call summarization capabilities using OpenAI APIs, reducing call wrap-up time by 15 percent. Designed and implemented Kafka-based event streaming pipelines processing 10,000 messages per second. Created automated testing frameworks using JUnit and Mockito, achieving 95 percent test coverage and improving deployment reliability. Automated CI/CD pipelines with Harness and Docker across 10+

microservices, reducing release times by 50 percent. Implemented Kubernetes autoscaling and supported AWS migration initiatives, improving infrastructure efficiency by 30 percent. Established Datadog monitoring and alerting, reducing incident recovery time by 20 percent.

Arcadia

Software Engineer II

May 2023 - May 2024 (1 year 1 month)

Chennai

Developed sustainable energy solutions using Java, Spring Boot, and Angular.

- Automated workflows and improved data integrity with Python geocoding and Java desktop applications.
- Reduced manual effort by 95% with an address-matching algorithm.
- Enhanced bill data processing with accurate error detection systems.

CGI

2 years 2 months

Senior Software Engineer

October 2022 - May 2023 (8 months)

Karnataka, India

Led the development of enterprise-grade microservices using Java and Spring Boot, ensuring scalable and maintainable architecture across modules.

- Delivered a robust frontend using Angular, enhancing user experience for critical business operations.
- Implemented CI/CD pipelines with Jenkins to streamline deployments and ensure rapid delivery of features with zero downtime.
- Applied best practices in software engineering by integrating unit and integration tests, improving code quality and maintainability.
- Integrated Spring Actuator and custom health endpoints for real-time system monitoring and diagnostics.
- Collaborated with cross-functional teams to align technical solutions with business goals, improving operational efficiency and reducing system failures.
- Actively participated in design reviews, code walkthroughs, and architecture discussions to ensure adherence to industry standards and security guidelines.

Software Engineer

April 2021 - October 2022 (1 year 7 months)

Bengaluru

Built and maintained a digital wealth platform for securities trading (NYSE/TSX).

- Enhanced performance with Angular lazy-loading.
- Improved API gateway for efficient microservices communication.
- Delivered a robust, user-centric application in an agile environment.

Education

Jawaharlal Nehru Technological University Hyderabad (JNTUH)

Bachelor's degree, Information Technology · (August 2016 - September 2020)
